SUMMARY

Software engineer with experience spanning industrial automation, ML research, and full-stack prototyping. Delivered Python and C# modules for production systems, optimized CNN/RNN models for accelerator research, and published findings in AI-based disease detection. Open to Python, ML, and software engineering roles that bridge applied ML and solid software engineering to create innovative and forward-thinking solutions.

EXPERIENCE

Software Engineer - ASM Technologies Ltd Jun 2025 – Apr 2026

- Developed Python and C# modules for industrial automation systems to improve software reliability.
- Enhanced software quality by performing testing and analysis to assist automation development workflows.

Machine Learning Intern - Dr. PallemSetti Center for Research and Technology Dec 2024 – Apr 2025

- Built an offline ride-booking prototype API, enabling functionality for regions with limited connectivity.
- Optimized CNN and RNN models for ML accelerator research using MATLAB.

Salesforce Launchpad Trainee - PwC Feb 2024 – Jul 2024

- Strengthened software development practices through Salesforce workflows and enterprise application training.

Software Intern - Adept Analytix Oct 2023 – Dec 2023

- Developed an Elasticsearch connector using Core Java and Maven within a startup environment.

PROJECTS

AI-Based Multi-Disease Detection System:

- Developed a multimodal AI framework using neural network models to detect ten chronic diseases using clinical images and time-series data.
- Deployed deep learning models including a Parkinson's disease detection system combining CNN-based image analysis and voice frequency for dynamic diagnosis.

Fake News Detection System:

- Built a Flask-based NLP classification system to identify misinformation using machine learning models.
- Implemented preprocessing, feature extraction, and model integration for real-time web-based predictions.

Railway Ticket Reservation System:

- Developed a Python application with responsive UI, admin/customer workflows, and database-driven reservations.

EDUCATION

Bachelor of Technology in Computer Science & Systems Engineering Dec 2021 – May 2025

Andhra University College of Engineering for Women

CGPA: 8.6

SKILLS

Programming	Python, Java, C#, C++, Frontend Technologies
Machine Learning	PyTorch, Deep Learning, Neural Networks, Model Optimization
Backend/Web	Flask, REST APIs, React, Node.js, Angular
Software Engineering	OOP, Testing, Validation, Version Control
Tools & Systems	DBMS, MATLAB, R, Postman API

RESEARCH & CERTIFICATIONS

- Published research paper: **“AI-Based Disease Detection Using Machine Learning and Convolutional Neural Networks”** – International Research Journal of Engineering and Technology (IRJET).
- Presented **“An Exploration of Neural Networks, Deep Neural Networks and their Architectures”** at Artificial Intelligence and Big Data Conference, Andhra University.
- **Certifications:** MATLAB Certified, Introduction to Generative AI (Google Cloud), Journey to Cloud (IBM), Exploratory Data Analysis for ML (IBM), Azure Fundamentals (Microsoft).
